## General information

### Introduction

The F141 incorporates two fully separated temperature indicators in one enclosure. There is no relationship between the inputs, even different measuring units can be used. A wide selection of options is available to further enhance this model's capabilities, including Intrinsic Safety and full Modbus communication.

### Display

The display has large 17mm (0.67") and 8mm (0.31") digits. For each temperature input, on-screen engineering units are easily configured from a comprehensive menu. The measuring unit is displayed together with the input channel information A or B. The F141 can be set to select the channel to display manually or with an automatic toggle function.

### Configuration

All configuration settings are accessed via a simple operator menu which can be pass-code protected. Each setting is clearly indicated with an alphanumerical description, which avoids confusing abbreviations and baffling codes. Once familiar with one F-series product, you will be able to program all models in the series without a manual. All settings are safely stored in EEPROM memory in the event of sudden power failure.

### Signal input

The F141 does accept (0)4 - 20mA and 0 - 10V input signals from any type of temperature measurement device. Both signal inputs require the same signal type, but different measuring ranges are allowed. Also available is an input loop powered version where the measuring range is 4 - 20mA.

### Communication

All process data and settings can be read and modified manually or through the Modbus communication link (RS232 / RS485). Full Modbus functionality remains available for the Intrinsically Safe version (TTL).

### Hazardous areas

This model has been ATEX and IECEx certified Intrinsically Safe for gas and dust applications, with an allowed operational temperature of -40°C to +70°C (-40°F to +158°F).

A flame proof enclosure with ATEX certification offers the rating  $\text{Ex II 2 GD EEx d IIB T5}$ .

### Enclosures

Various types of enclosures can be selected, all ATEX and IECEx approved. As standard the F141 is supplied in an GRP panel mount enclosure, which can be converted to an IP67 / NEMA 4X GRP field mount enclosure by the addition of a back case. Most popular is our rugged aluminum field mount enclosure with IP67 / NEMA 4X rating. Both European or U.S. cable gland entry threads are available.
